No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                            344

Sequence 8, Application US/09135080

Patent No. 6423877

GENERAL INFORMATION:

APPLICANT: Pimenta, Aurea

APPLICANT: Fischer, Itahic System-Associated Membrane

TITLE OF INVENTION: Limbic System-Associated Membrane

TITLE OF INVENTION: Limbic System-Associated Membrane

TITLE OF SEQUENCES: 29

NUMBER OF SEQUENCES: 29

CORRESPONDENCE ADDRESS: 397 Lenox Drive, Building 3, Suite 210
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  81; Indels

Patent No. 5861283
GENERAL INFORMATION:
APPLICANT: Levitt, Pat
APPLICANT: Pimenta, Aurea
APPLICANT: Fischer, Itzhak
APPLICANT: Zhukareva, Victoria
TITLE OF INVENTION: Limbic System-Associated Membrane
TITLE OF INVENTION: Protein and DNA
NUMBER OF SEQUENCES: 60
                                                                        COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: DOS
SOFTWARE: FastSEG for Windows Version 2.0
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/414,657D
FILING DATE: 31-MAR-1995
CLASSIPTCATION: 435
PRIOR APPLICATION 1435

ISOIG=090773-2; Sequence-VSP 002607;

ISSUE SPECIFICITY: Found on the dendrites, somata and axons of developing Purkinje cells. Undetectable on other neurons like Golgi or granule cells.

DEVELOPMENTAL STAGE: Expressed by developing cerebellar Purkinje cells. Expression coincides with the growth of the dendritic tree, after Purkinje cells have finished their migration from the ventricular zone (from E15 until E21). Expressed in the adult. SIMILARITY: Belongs to the immunoglobulin superfamily. IgLON

Neural secreted glycoprotein (CEPU-Se alpha 2 isoform).
Name=CEPU; Synonyms=CEPU-Se;
Gallus gallus (Chicken).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Archosauria; Aves; Neognathae, Galliformes; Phasianidae; Phasianinae;
 N-linked (GlcNAc. .) (Potential).
N-linked (GlcNAc. .) (Potential).
N-linked (GlcNAc. .) (Potential).
GPI-anchor amidated serine (Potential).
                                                                                                                                                            11; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE-99347334; PubMed=10420985; Kim J.Y.; Kim D.S., Rhew T.H., Moss D.J., Kim J.Y.; CDNA cloning of the CEPUS, a secreted type of neural glycoprotein belonging to the immunoglobulin-like opioid binding cell adhesion molecule (OBCAM) subfamily.";

-:- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
-:- TISSUE SPECIFICITY: Restricted to the nearyous system.
-:- DEVELOPMENTE, STAGE: Increased during development from very low levels at embryonic day 10 and is most abundant after hatching.
-:- SIMILARITY: Belongs to the immunoglobulin superfamily. IgLON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TISSUE=Brain;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

N'Alternate names: NCAM-180
N'Achtennate names: NCAM-140)
N'Contains: neural cell adhesion molecule, short domain splice form (NCAM-140)
C'Species: Mus musculus (house mouse)
C'Date: 31-Mar-1993 #sequence_revision 31-Mar-1993 #text_change 09-Jul-2004
C'Accession: A29673; S00844; S00384; A28281; A44280; S00383

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Molecule type: protein
Kresidues: 20-36 <ROUS
C;Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol
C;Comment: Several forms of NCAM are produced by alternative splicing. See also PIR:IJMS

neural cell adhesion molecule long domain form precursor - African clawed finely adherente names: NCAM-180
N;Contains: neural cell adhesion molecule, short domain form (NCAM-140)
C;Species: Xenopus laevis (African clawed frog)
C;Species: 31-Mar-1993 #sequence_revision 31-Mar-1993 #text_change 09-Jul-2004
